Technical Skills

- **Core Languages:** C++, C#
- **AI-Assisted Development:** Expert-level prompt engineering with AI code generation tools (Cursor) to produce and manage full-stack applications in **TypeScript/JavaScript** and **SQL**.
- **AI/ML:** Google Gemini API, Ollama, PDF Parsing (pdf-parse)
- **Data & Backend:** PostgreSQL (Supabase), Stripe API, REST APIs

Projects

flowposal | AI-Powered SaaS for Upwork Freelancers

Directed an AI code generation assistant (Cursor) to solo-develop and launch a full-stack SaaS application, architecting the entire system from UI/UX to backend logic and database schema.

- **Key Technologies:** Next.js, TypeScript, React, Express.js, Supabase (PostgreSQL), Stripe, Vercel
- Spearheaded the rapid development of a **Next.js/TypeScript** frontend, specifying UI components with **shadcn/ui**, animations with **Framer Motion**, and state management with React Hooks.
- Architected a dual-backend system, utilizing Next.js API routes for core logic and a separate **Express.js** server, defining API contracts and validating schemas with **Zod**.
- Engineered the AI core, integrating the **Google Gemini API** for proposal generation and leveraging **pdf-parse** to implement a resume analysis feature.
- Designed and implemented the **PostgreSQL** database schema and business logic, writing specifications for functions and triggers in Supabase to automate user onboarding.

Experience

Co-founder & AI Engineer HuntOrca LLC | California Solar Data Platform

Co-founded a data startup; specialized in building the AI-powered data extraction pipeline that ingested and processed over 500,000 building permit records.

- **Key Technologies:** Python, **Ollama**, Scrapy, **Selenium**, **Chromium**, Apache Airflow, PostgreSQL, 2captcha API
- Developed a robust web scraping pipeline in **Python**, using **Selenium** and **Chromium** to automate browser interactions and bypass anti-bot measures on government websites.
- Engineered an "intelligent scraper" by fine-tuning a local **Ollama** model to perform entity extraction on unstructured HTML, dramatically increasing the accuracy of data

collection.

- Managed the data workflow by orchestrating the scraping and ingestion scripts with **Apache Airflow**, ensuring data integrity into a **PostgreSQL** database.

Education

Seattle Pacific University | Seattle, WA **Bachelor of Science in Computer Science** |

Expected June 2028

- **Relevant Coursework:** Data Structures & Algorithms, Software Engineering, Operating Systems, Computer Architecture, Database Systems, Linear Algebra
